

ML Homework4

Due Date : 2019/11/18 (MON.) 23:55

TAs' email address: jhhlab.tw@gmail.com

Description :

1. Logistic regression

- Input:
 1. N (number of data points)
 2. $mx_1, vx_1, my_1, vy_1, mx_2, vx_2, my_2, vy_2$ (m : mean, v : variance)
- Function:
 1. Generate n data point: $D1 = (x_1, y_1), (x_2, y_2), \dots, (x_n, y_n)$, where x and y are independently sampled from $N(mx_1, vx_1)$ and $N(my_1, vy_1)$ respectively.
 2. Generate n data point: $D2 = (x_1, y_1), (x_2, y_2), \dots, (x_n, y_n)$, where x and y are independently sampled from $N(mx_2, vx_2)$ and $N(my_2, vy_2)$ respectively.
 3. Use Logistic regression to separate $D1$ and $D2$. You should implement both Newton's and steepest gradient descent method during optimization.
 - In other words, when the Hessian is singular, use steepest descent for instead. You should come up with a reasonable rule to determine convergence.(a simple run out of the loop should be used as the ultimatum)
- Output:
 1. The confusion matrix and the **sensitivity** and **specificity** of the logistic regression applied to the training data D .
 2. Visualization
 - Plot the ground truth
 - Plot the predict result
 - Gradient descent
 - Newton's method

Use the Gaussian random number generator in homework 3.

- Sample input & output (for reference only)
 - Case 1: $N = 50, mx_1 = my_1 = 1, mx_2 = my_2 = 10, vx_1 = vy_1 = vx_2 = vy_2 = 2$

2. EM algorithm

- Input: [MNIST training](#) data and label sets. (Same as HW02)
 - Function:
 1. Binning the gray level value into **two bins**. Treating all pixels as random variables following Bernoulli distributions. Note that each pixel follows a different Binomial distribution independent to others.
 2. Use EM algorithm to cluster each image into ten groups. You should come up with a reasonable rule to determine convergence. (a simple run out of the loop should be used as the ultimatum)
 - Output:
 1. For each digit, output a confusion matrix and the **sensitivity** and **specificity** of the clustering applied to the training data.
 2. Print out the imagination of numbers in your classifier
 - Just like before, about the details please refer to HW02
 - Hint: The algorithm is a kind of unsupervised learning, so the labels are not used during training. But you can use these labels to help you to figure out which class belongs to which number.
- In other words, you should find a way to assign label to each class which you classified **before you compute the confusion matrix**
- Sample input & output (**for reference only**)

```
